

iQuote

Intelligent estimating, quoting,
and production planning for
the print industry

SMART ESTIMATING, QUOTING, AND PRODUCTION PLANNING

iQuote is smart software that automates the process of picking the best path for a job through your facility. Processing thousands of pieces of information for each job, including a careful look at virtually every piece of equipment and capability you have, the system makes estimating a visual “smart” process that maximizes your profit potential on every job.

Capture your best practices and centralize your estimating process

-  An intuitive, easy-to-learn, browser-based interface
-  A fully integrable and flexible system to match your equipment and processes
-  Fast, accurate, and consistent estimates regardless of the user’s experience level
-  Smart, automated production planning using the most cost-efficient job path
-  A highly visual workflow review with detailed step-by-step details
-  Structure to support standards with flexibility to handle reality
-  Consolidated estimating knowledge in a centralized, shared database

Dynamic estimating and planning

Start simple:

iQuote's job specifications are based on the elements and properties of the finished product - not on the technical processes required to produce it. This keeps the technical decision making within the software.

Automate exploration:

The software looks at your company's processes and equipment, and calculates the best production path. Every detail of every possible path is considered with no omissions or selection errors and no skipped steps so you don't forget anything.

Smart selection:

iQuote narrows the field by adding up the costs of each workflow path, presenting you with the most cost-effective choice for each. Each quantity of the final quote can have a unique production path, giving you the ability to choose the most efficient, lowest cost plan for your business.

Flexibility and optimization:

The software is both smart and flexible, allowing estimators to make different production choices. They can rely on iQuote to show them the difference in cost between the optimal path and the one they've chosen, immediately. Instant feedback means smarter decision making on every estimate, with an audit trail for improved insight into the overall estimating process.

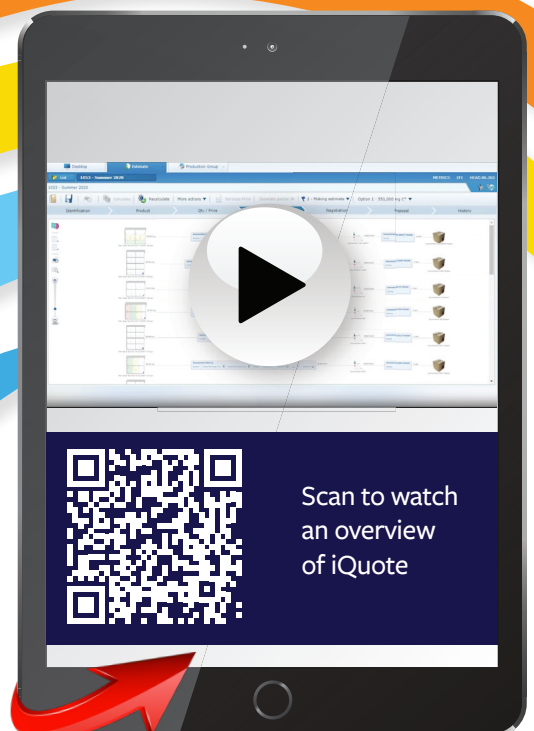

Make the smart decision:

iQuote makes the final quote an intelligent decision. The estimator and/or manager is presented with an opportunity to review and change costs, margins, and prices with immediate visibility into the impact of the edits.

Improve speed, accuracy, and consistency to increase profitability

iQuote allows users to access specific areas of the system depending on their role within the business. The flexibility of the assigned roles ensures each staff member can receive specific permissions to operate and control as much or as little as required.

- Improve speed and accuracy to win more business
- iQuote engineers the job, allowing you to see every step and exactly what is required to produce the job and in an easy-to-read workflow diagram
- The results: you get the best engineering plan with the lowest cost and the highest return.
