Data Collection
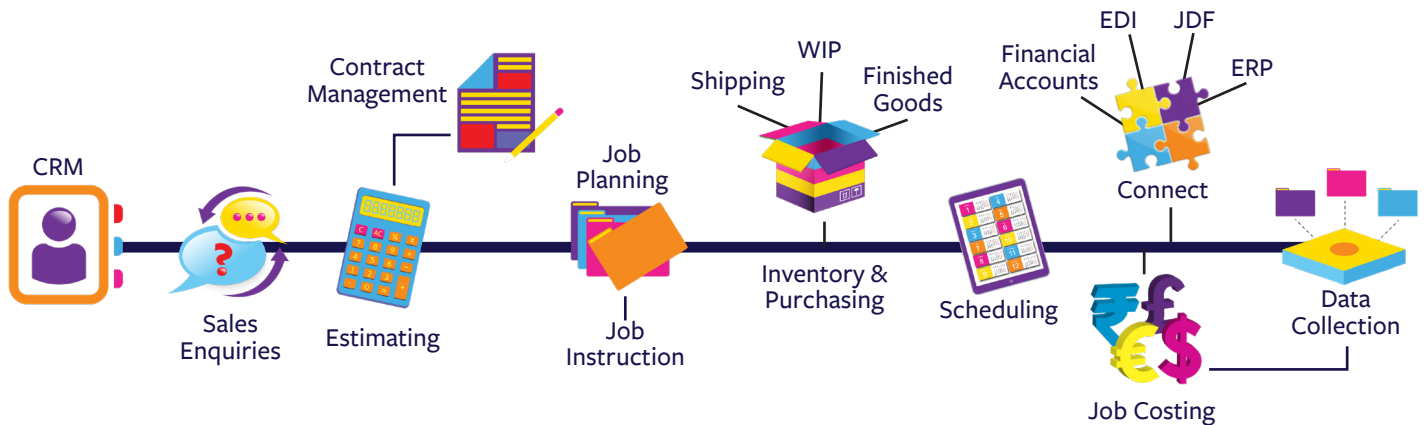

Control costs, reduce waste, and increase efficiency with the following productivity solutions:

Optimize your business management, reduce waste, and boost your bottom line with certified end-to-end workflows and scalable components, providing the confidence and flexibility you need to meet today's goals and grow your business over time.

Sales inquires

Produce fully calculated quotes in seconds or submit them to the estimating team with Technique's eCRM capabilities. This browser-based request for quotes (RFQs) has online re-price functionality, PDF quote letter generation, and full RFQ status while managing sales activities and opportunities, marketing projects, and more.

Estimating

A unique rules-based estimating engine calculates all possible production routes in seconds and even shows available capacity to help and improve the performance your commercial department.

Contract management

Manage your customers' contract price lists, create related titles, and efcfortlessly manage the forward schedule of repeat jobs. Additionally, generate price list quotations in seconds and streamline the contract billing process.

Job planning

Working in tandem with the Suite components, Metrix is designed to change the way prepress handle layout tasks. Automate planning and prepress processes, increase operational efficiencies, and get error-free planning and imposition. All while the Suite components assign production routing across your enterprise with job planning functionality, automatic cost calculations and synchronized production plans.

Inventory control

An optional Warehouse Taxi System allows for the automatic delivery of just-in-time instructions to warehouse vehicle-mounted tablet devices that can direct vehicle operators on where and when to move materials, ensuring ensure smooth and efficient operations.

Production scheduling

Using rules-based automated scheduling, PrintFlow® takes a global view of your schedule and optimizes it while maintaining critical dates. This enhances Technique's ability to make critical production decisions as it tracks capacity, use progress indicators, analyze planned versus actual costs, optimize short-run print-on-demand jobs, and more.

Enhanced API

Connectivity designed to interface and integrate with external systems including a powerful, automated job building function and out-of-the-box workflows with JDF, AGFA, and Kodak, Thomson Reuters, and Microsoft Dynamics GP.

Job costing

Job costing provides in-depth analysis of costs and variance to sales and production estimates, allowing business owners to focus on areas of inefficiency and identify profitable products and customers.

Data collection

Automatically collect accurate, real-time production data including counts, machine status, speed, waste and downtime. With Technique DMI, Auto-Count 4D®, or both in your environment, all data is fed back to Technique ERP and made available in the same format for dashboards, validation, costing, and reporting for a familiar and consistent view of what's happening on the shop floor.

Reporting

Analytical reporting tools allow quick, simplified access to key information on which to improve business performance. A custom report builder and the ability to automatically publish reports to the user base keep the organization informed and agile.

Fulfillment & Shipping

The Technique item-based inventory module supports fulfillment services, including print on demand and replenishment of stock. Process Shipper, a browser-based shipping solution, then springs into action with a direct interface to service provides like UPS and FedEx for rate shopping. Combining real-time label outputand tracking numbers, eliminating touch points and accelerating workflows.
